Service Description:

CRISP provides an internet product accessed via the nbn® network. These services provide the typical evening speeds listed for each plan in the above table. Typical Evening Speeds are based on the download and upload speed test results of customers between 7pm and 11pm and are subject to change. Maximum broadband speeds may be limited by your choice of router, its position within your premises, the number of users simultaneously accessing the network and other external factors such as cabling and home construction materials. Wi-Fi connected devices may have slower speeds than Ethernet connected devices. We will inform FTTP, FTTN & FTTC customers of their actual download speed once connected, and you will have the option to downgrade to a lower speed plan without penalties.
